Senior Software Engineer specializing in distributed systems and event-driven architecture, with 6+ years in fintech and HR tech. Built and led end-to-end delivery of cloud-native systems at scale, eventually taking on Technical Lead ownership of architecture and technical direction. Currently applying LLM-based agents to automate workflows and enhance product capabilities.

WORK HISTORY

Senior Software Engineer

Jan 2022 – Present

symmetrical.ai

Warsaw, Poland

- Built HRIS and Payroll platform from 0 to 173 enterprise clients and 2,124 MAU on a distributed system of 33 microservices processing 17.6M requests/month, at a startup backed by \$18.5M Series A funding.
- Navigated two major product pivots, maintaining system stability and team alignment throughout.
- Took leadership of several technical initiatives and team deliveries, eventually assuming end-to-end ownership as Technical Lead of a 6-person engineering team, overseeing architecture, delivery, and technical direction.
- Introduced LLM-based agents to automate internal workflows and enhance product capabilities.
- Tech stack:** Kotlin, Spring Boot, MongoDB, Apache Kafka, Kubernetes, AWS, TypeScript, React.js, Mastra

Software Engineer

Jul 2021 – Dec 2021

Sollers Consulting

Warsaw, Poland

- Developed new features for the internal HRIS platform used daily by 1,000+ Sollers employees, working on both backend and frontend layers.
- Tech stack:** Java, Spring Boot, PostgreSQL, React.js, TypeScript

Freelance Software Engineer

Jul 2020 – Jun 2021

Freelance

Remote

- Worked as an independent software engineer, delivering client projects remotely.
- Built Ethereum smart contracts and delivered Web3 applications, including an online game, an ERC-20 token exchange, and an ERC-20 token airdrop platform.
- Provided Solidity consulting, with a focus on smart contract design, security, implementation, and review.
- Tech stack:** Solidity, Express.js, TypeScript, React.js, Web3 technologies

Software Engineer

Jul 2019 – Jul 2020

Ignite Software Development

Remote

- Led a team of engineers to deliver a SaaS financial reporting platform, reducing report generation time by 60%.
- Additionally, provided consulting support for enterprise clients integrating and customizing solutions on the Salesforce CPQ platform.
- Tech stack:** Kotlin, Spring Boot, PostgreSQL, Kubernetes, Google Cloud Platform

IoT Engineer Intern

Jul 2017 – Aug 2017

Transition Technologies PSC Sp. z o.o.

Kielce, Poland

- Built a C++ framework for the ESP8266 platform that streamlined development of IoT devices and accelerated prototyping of sensor and actuator modules.
- Tech stack:** C++, Arduino Framework

SKILLS

Languages: Kotlin, Java, Python, TypeScript

Frameworks & Libraries: Spring Boot, FastAPI, React.js, GraphQL

Databases & Infrastructure: MongoDB, PostgreSQL, Kafka, Kubernetes, AWS, Qdrant

Architecture: DDD, Hexagonal Architecture, Distributed Systems, CQRS, Event Sourcing

AI & Machine Learning: AI agents, RAG, LLM integrations, Mastra

EDUCATION

Warsaw University of Technology

Feb 2024 – Sep 2026

Computer Science, Master's Degree – Specialization: Intelligent Systems

- Thesis: *Application of large language models (LLMs) for generating Docker and Kubernetes configurations* [github]

Warsaw University of Technology

Oct 2020 – Feb 2024

Computer Science, Bachelor's Degree – Specialization: Software Engineering

- Thesis: *Application of microservice architectures in creating scalable web applications* [github]

CERTIFICATES

- AI_devs 3 – Agents Reloaded** [link] June 2025
- Completed a comprehensive AI engineering program focused on practical applications of LLMs, including RAG pipelines, agents, and fine-tuning techniques.
- EF SET English Certificate 75/100 (C2 Proficient)** [link] January 2018

LANGUAGES

English: C1 Advanced (EF SET 75/100)
Polish: Native

PUBLICATIONS

- Understanding Task Enjoyment in Software Development: A Mixed-Methods Study on Practitioners' Perspectives**
- ICSE 2026 – Software Engineering in Practice | June 2026
 - DOI: 10.1145/3786583.3786884 | Conference page

AWARDS

- Hackathon BEST Hacking League 7** – Winner April 2022
- Google Summer of Code 2021** – Contributor (OpenMRS) [link] August 2021
- Hackathon Idea Kielce 2018** – Winner [link] June 2018
- Google Code-in 2017** – Winner [link] January 2018

OPEN SOURCE

- OpenMRS Contributor** Nov 2017 – Aug 2021
- Contributed to the OpenMRS platform by implementing core features and reviewing community pull requests. Helped improve healthcare access in under-resourced regions through open-source technology.
